National Register of Historic Places Continuation Sheet

Section number 7 Page 1

Description

Located on Phillips County Road 14I at the point where it crosses Lambrook Levee Ditch, the Warrens Bridge is of the timber trestle type. It consists of a total of seven spans, the longest of which measures 15 feet. Its total length is 100 feet and its overall width is 16 feet. Its abutments are of timber construction, as are its six sets of piers, each set including four round wooden supports with a single diagonal cross brace. The deck is constructed of timber also.

United States Department of the Interior
National Park Service

National Register of Historic Places Continuation Sheet

Section number 8 Page 1

Significance

Constructed in 1930, the Warrens Bridge is associated with the *Arkansas Highway and Transportation Era* historic context and is of the timber wooden trestle type. Though the identity of its original designer does not survive, it was constructed in conjunction with the Arkansas State Highway Commission and thus may well have been designed by one of that state agency's engineers. Given its relatively intact condition it retains sufficient integrity to remain associated with its historic period and is thus locally eligible under Criterion C.
