National Register of Historic Places Continuation Sheet

Section number 7 Page 1

Summary

Williamson Hall at Arkansas Tech University is two story, brick masonry classroom building designed in the Classical Revival style. Its plan is "E"-shaped, as its central gable roof section is flanked on either side by two long, flat roof, single story sections, and a central flat roof section also projects from the rear of the center of the gable roof section. Asphalt shingles cover the gable roof section and built-up tar roofs cover each of the flat roof sections. The brick walls are supported upon a continuous cast concrete foundation.

Elaboration

Williamson Hall at Arkansas Tech University is two story, brick masonry classroom building designed in the Classical Revival style. Its plan is "E"-shaped, as its central gable roof section is flanked on either side by two long, flat roof, single story sections, and a central flat roof section also projects from the rear of the center of the gable roof section. Asphalt shingles cover the gable roof section and built-up tar roofs cover each of the flat roof sections. The brick walls are supported upon a continuous cast concrete foundation.

The eastern or front elevation consists of the side gable wall of the two-story connecting section -- dominated by the central, white, pedimented two-story entrance portico -- and the end walls of the two flanking single story, flat-roof sections. The portico is ornamented with a pediment that is blank save for the central oculus window with its Colonial Revival detailing, and that is supported upon six Doric wood columns resting upon a concrete deck. The double-leaf entrance behind is framed by a transom and a Colonial Revival decorative crown, featuring a broken pediment. A single window is placed to either side of the entrance, and three more single windows are placed in the wall directly above the entrance, but beneath the portico ceiling. The walls to either side of the portico are symmetrical on both floors. Each is three window bays in length, with each window bay containing a pair of windows. The walls of the flat roof sections to either side are each lighted with two symmetrically-placed window bays. The western elevation opposite is also symmetrical, with the central, flat roof, projection section being divided equally by a central, double-leaf entrance that is flanked on either side by a pair of windows. The two-story walls behind are each three window bays long, though the number of windows in each bay differs between them, and between floors. The walls of the flat roof sections to either side of the main section are symmetrically-divided by a central, double-leaf entrance with a single window bay to either side, each filled with a pair of windows.

National Register of Historic Places Continuation Sheet

Section number 7 Page 2

The inside of the northern projecting end bay is lighted with three pairs of windows; the inside of the southern projecting bay is lighted with four pairs of windows. The side walls of the central projecting section is lighted with three pairs of windows on its north elevation and four pairs of windows on its southern elevation.

The northern and southern elevation are each divided into six bays. The northern elevation is lighted with six pairs of windows; the southern elevation is lighted with one window bay to the east, four more to the west, and a double-leaf entrance bay in between.

Williamson Hall has suffered the replacement of virtually all of its original windows; otherwise the building is largely intact and unaltered. It is in good condition.

Section number 8 Page 1

Williamson Hall; Arkansas Tech University

Arkansas Tech University was founded in 1909 when the Arkansas General Assembly created four Agricultural School Districts, with the Second District being formed by the twenty counties of northwest Arkansas. The city of Russellville offered the governor-appointed Board of Trustees four-hundred acres adjoining the city limits and a cash bonus of several thousand dollars, and was thus selected as the site of the new school.

The Second District Agricultural School -- as it was initially known -- first matriculated students in the fall of 1910. The school was planned to function initially as an agricultural secondary school and to grow into a four-year college-level institution as soon as possible. It first offered a freshman year of college work in 1921-22, and instituted second, third and fourth years in each of the succeeding academic years, respectively, so that by 1925 both a four-year high school and a four-year college were operating on the same campus. This progress was acknowledged by the Arkansas General Assembly in 1925 when it changed the name of the school to Arkansas Polytechnic College and awarded it the power to grant degrees. However, this ambitious program proved beyond the resources of the school, and by 1927 it became a two-year junior college. It remained so until 1948, when the Board of Trustees re-instituted its degree-granting status with a plan to return to a four-year school. The General Assembly officially changed the name to Arkansas Tech University in 1976.

The 1930's heralded one of the most ambitious periods of construction on the campus. As was the case with many public sites and institutions around the state, the labor force was largely contributed by the Emergency Relief Administration (ERA), the federal agency established by President Franklin D. Roosevelt to hire the nation's unemployed for the purpose of carrying out a broad variety of projects in the public interest. The Works Progress Administration (WPA), the National Youth Administration (NYA) and the Civilian Conservation Corps (CCC) were all subsidiary organizations whose work in Arkansas was overseen by the ERA.

Williamson Hall was constructed in 1940 by the National Youth Administration. As such, it was built during the period covered by the historic context *The Evolution of the Public School System in the Arkansas Ozarks, 1920-1940*, and stands as an outstanding example of a large, brick masonry classroom building with an "E"-shaped plan designed in the Classical Revival style (e.g., the absolutely symmetrical composition of the front facade and the pedimented Classical central entrance portico with its four Doric columns that dominates the composition). Its use during this period as an educational classroom building for a public university clearly identifies it with this historic context and with this property type. It is significant locally under Criterion

A through its direct associations with both the history of the evolution of the public school system in the Ozark Mountain region of the state during this period and the N.Y.A. It is also eligible under Criterion C as the best example locally of this application of the Classical Revival style to this particular floor plan.
