National Register of Historic Places
Registration Form

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in *Guidelines for Completing National Register Forms* (National Register Bulletin 18). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries.

1. Name of Property

historic name Shutter, John, House

Description

During the Railroad Era (1870-1914) in White County a variety of vernacular houses were constructed. They were also built out of a variety of materials. Surviving examples from this period, however, are somewhat limited. The John Shutter House is a good example of a one-and-one-half-story double-pile building that is of frame construction and clad with novelty siding. The hipped and gable roofs are covered with composition shingles and the entire structure rests on a stone foundation.

Located on the south corner of Austin and Main Streets, this building was constructed one block southwest of the Pangburn commercial district. The John Shutter House was constructed in 1908 and even though it has had some historic alterations it is still in good condition.

Its main, or east elevation is dominated by a one-story hipped roof porch that extends across practically the entire front of the original building. The porch roof is supported by wooden columns on stucco clad piers. This part of the structure is fenestrated with symmetrically placed pairs of three-over-one double-hung wood sash windows. They flank the centrally placed single door. A gable roof dormer towers above this entrance. The dormer is relieved by paired two-over-two double-hung wood sash windows.

A side-ell addition projects from the southeast portion of the original building. Due to the fact that the side-ell is fenestrated with three-over-one double-hung wood sash, popular in the late 1920's, it is believed that this is when it was added. A shed roof carport extends the full-length of the south elevation of the side-ell. West of this, and attached to the original block of the building is an enclosed porch. Its south elevation is relieved by an asymmetrically placed door; immediately east of this door is a pair of one-over-one single-hung wood sash windows. The west elevation of the enclosed porch is fenestrated with a centrally placed three-over-one double-hung wood sash window.

Continuing on to the southern half of the west elevation of the original building, fenestration is symmetrically placed. It consists of paired three-over-one double-hung wood sash windows. The northern half of the west elevation houses a shed roof enclosed porch. Its west elevation is relieved by screened openings. A single centrally placed door accesses the south elevation of this porch.

The north elevation of the house is dominated by a centrally placed recessed porch. A symmetrically arranged door and single three-over-one double-hung wood sash window are found on this recessed porch. Small symmetrically placed three-over-one double-hung wood sash windows are located south of the recessed porch while a gable roof bay is north of the porch. Centrally placed paired three-over-one double-hung wood sash windows fenestrate the north elevation of this bay.

The upper portion of the gable roof bay is decorated with imbricated wood shingles and a lone centrally placed single-pane fixed frame window. Other gable ends of the structure lack the imbricated wood shingles and have louvered wooden vents in place of the fixed frame window.

Significance

Little is known of John Shutter other than that he was a merchant and ran a general store in Pangburn. His house, however, is being nominated under Criterion C with local significance because of the insight it provides into historic construction techniques and styles.

When this building was constructed in 1908, it was one of numerous frame double-pile houses built in White County during the Railroad Era. While there are thirty-one of these houses which survive in the county, few reflect the period in which they were constructed. Though the John Shutter House today reveals the impact of several additions it is still a good example of the way that houses have evolved through the years from relatively small floorplans to larger versions.
